# WORLD TRADE IN SELECTED AGRICULTURAL COMMODITIES 1951-65

**VOLUME V. —**

OILSEEDS, OIL NUTS, AND ANIMAL AND VEGETABLE OILS

Studies in the Series on World  
Trade in Selected Agricultural  
Commodities, 1951-65

Beverage Crops: Coffee, Cocoa, and Tea  
Food and Feed Grains: Wheat, Rice, Maize (Corn), Barley, and Other Cereals  
Textile Fibers: Cotton, Jute, and Other Vegetable Fibers  
Sugar, Fruits, and Vegetables  
Oilseeds, Oil Nuts, and Animal and Vegetable Oils

## PREFACE

This is one in a group of statistical studies on world agricultural trade, prepared as a part of the research project, "Analysis of Demand Prospects for Agricultural Products of the Less Developed Countries," being conducted by the Economic Research Service under a participating agency service agreement for the Agency for International Development.

These volumes present 1951-65 data on trade flows of selected agricultural commodities for 19 importing or exporting regions, showing regions of origin of imports and destination of exports. These data, not available in this form from other sources, are presented in tabular matrix form so that the volume of trade--exports and imports--among the 19 regions can readily be discerned. These statistical series include commodities which account for 80 percent of the agricultural exports and 33 percent of all exports of less developed countries and are believed to be the most comprehensive series available. These series should fill a part of the information gap in international trade and make possible a more comprehensive analysis of changes in the patterns of trade in agricultural products. Although there is some repetition of world trade information in the series, it is necessary because not all readers will want the entire group or series.

This volume on oilseeds, oil nuts, and animal and vegetable oils is based on data from many different sources. It has been necessary to make estimates of trade flows based upon value data for some countries because of incomplete reporting. World exports of each commodity in any one year equal world imports.

This volume also includes tables for 1964 showing total world trade and total agricultural trade for 19 importing regions and regions of origin of imports. Conversely, they show trade flows for 19 exporting regions and destination of their exports. These data on agricultural trade are in a form not available from other sources. They provide a basis for observing the importance of oilseeds, oil nuts, and animal and vegetable oils in total trade and in agricultural trade by countries and regions.

The research project on the demand prospects for agricultural exports of less developed countries is being conducted by ERS in three phases (1) historical analysis of trade flows, (2) analysis of demand prospects, and (3) analysis of policy implications of estimated world demand prospects, under the joint supervision of an ERS Technical Advisory Committee by Arthur B. Mackie and Anthony S. Rojko. Special acknowledgement is given to Paul W. Chemnick and Daniel W. Hiester, Jr. for their work in compiling the trade data on vegetable oils and oilseeds. Martin E. Abel, Deputy Assistant Secretary, International Affairs, was Chairman of this committee at the start of the project.

## SUMMARY

World trade in oilseeds, oil nuts, and animal and vegetable oils was valued at \$3.1 billion or about 7.9 percent of world agricultural trade in 1964. The value of world trade in these commodities was \$3.3 billion or 8.5 percent of world agricultural trade in 1965. The largest of these export crops is oilseeds and oil nuts, representing about \$1.5 billion, or 4 percent of world agricultural trade in 1964. The value of vegetable oils--the second largest--was \$0.975 billion; that of animal oils and fat exports was valued at \$0.532 billion.

The total volume of world trade in animal and vegetable oils and fats, and oil equivalent of oilseeds and oil nuts increased during 1951-65 at an average annual rate of 5.6 percent. Exports of animal oils and fats led--growing at 6.9 percent, while vegetable oils increased 6.4 percent per year. World trade in oilseeds and oil nuts increased only 0.7 percent per year during the period.

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods needed for economic development. In 1965, 15 countries depended upon exports of oilseeds, oil nuts, and animal and vegetable oils for more than 20 percent of their export earnings. Seven countries depended upon these commodities for more than 50 percent of their export earnings. For more than 50 percent of their export earnings in 1965, 11 countries relied upon coffee, cocoa, or tea; eight countries relied upon sugar, three countries upon cotton or jute, two countries upon cereals, and two countries upon fruits and vegetables.

The United States, West Africa, Other East Asia, Canada, the European Economic Community (EEC), Latin America, and Communist Asia accounted for 81 percent of world exports of oilseeds, oil nuts, and animal and vegetable oils. The United States alone accounted for 45 percent of world exports, West Africa accounted for 14 percent, Other East Asia for 6 percent; while Canada, the European Economic Community (EEC), Latin America, and Communist Asia each accounted for about 4 percent of world exports in 1964.

The major importers of oilseeds, oil nuts, and animal and vegetable oils are Japan, EEC, and the European Free Trade Association (EFTA). These three major importers accounted for 69 percent of world oilseeds, oil nuts, and animal and vegetable oil imports in 1964. Western Europe (EEC and EFTA) is by far the most important import market for oilseeds, oil nuts, and animal and vegetable oils--accounting for 55 percent of world imports in 1964. Western Europe (EEC and EFTA) alone accounted for 59 percent of world imports of oilseeds and oil nuts, and 49 percent of world imports of animal and vegetable oils. Japan, the second largest import market, was an important import market only for oilseeds and oil nuts--accounting for 20 percent of world imports.

WORLD TRADE IN SELECTED AGRICULTURAL COMMODITIES, 1951-65  
Volume V.--Oilseeds, Oil Nuts, and Animal and Vegetable Oils

INTRODUCTION

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods. For example, according to the 1966 FAO Trade Yearbook there were 66 less developed countries and territories in 1965 with agricultural exports accounting for more than 50 percent of total export earnings. Because of this heavy dependence upon agricultural exports, fluctuations of export prices for agricultural commodities cause large variations in export earnings and on total economic growth. These variations are especially large in the case of countries depending upon export earnings from only one or two commodities.

In 1965, 15 countries depended upon oilseeds, oil nuts, and animal and vegetable oil exports for more than 20 percent of their export earnings (table 1). Seven countries depended upon these commodities for more than 50 percent of total export earnings. There were 11 countries in which coffee, cocoa, or tea accounted for more than 50 percent of export earnings. Eight countries depended upon sugar, three countries upon cotton or jute, two countries upon cereals, and two countries upon fruits and vegetables for more than 50 percent of their export earnings.

The less developed countries need better information on demand prospects for agricultural exports as a basis for planning and carrying out economic development programs. Future growth in the export demand for agricultural commodities of the less developed countries will influence the amount of land and other resources that can economically be used for expanding the production of export commodities.

This report presents detailed trade data that can be used for evaluating trade prospects for oilseeds, oil nuts, and animal and vegetable oils. It contains historical data on the volume of exports and imports for some of these commodities for 19 regions for 1951-65. Trade data on some commodities are presented for 1962-65 only. Trends in the growth of trade in these commodities by major countries and regions are compared with trends in population

and per capita income growth for 1951-65. Data on value of exports and imports of these commodities by regions are not now available in matrix form. However, world export unit values for selected oilseeds, oil nuts, and animal and vegetable oils are shown in tables 2 and 3 for prewar and 1948-66. Value trade matrices for some of these commodities can be obtained by multiplying these unit prices by the quantities in the following tables. However, such values will not necessarily equal the import or export values as reported by the United Nations since the unit prices will differ somewhat by countries.

## WORLD PATTERNS OF AGRICULTURAL TRADE

The volume of world agricultural exports has increased about 3.5 percent per year from the average of 1948-52 to 1964-65. In real terms, the value of agricultural exports grew at an annual rate of 2 percent during this period (6). <sup>2/</sup>

Trade in agricultural products in 1964 was about one-fourth the value of total world trade (tables 4 and 5). In 1964, the value of world agricultural trade amounted to \$38.6 billion. As a group, the less developed countries accounted for 37 percent of world agricultural exports and 16 percent of world agricultural imports (table 6). The value of agricultural exports of the less developed countries in 1964 was \$14,468 million, whereas their agricultural imports were only \$6,186 million. The developed countries were the major markets for the agricultural exports of less developed countries--accounting for 78 percent. The United States alone took 21 percent of the agricultural exports of less developed countries. Agricultural exports of the less developed countries to each other accounted for 14 percent.

As with agricultural exports, the developed countries accounted for the major share (61 percent) of the agricultural imports of the less developed countries. The less developed countries turned to other less developed countries for 32 percent of their agricultural import needs, or slightly less than the 36 percent from the United States (table 6). The remaining 7 percent of agricultural imports of the less developed countries come from the Communist Bloc.

## IMPORTANCE OF OILSEEDS, OIL NUTS, AND ANIMAL AND VEGETABLE OILS IN WORLD TRADE

The total value of world trade in oilseeds, oil nuts, and animal and vegetable oils as reported by the 1966 FAO Trade Yearbook was \$3.1 billion or 7.9 percent of the value of world agricultural trade in 1964. Oilseeds and oil nuts were the largest export earners among the commodities considered in this report. This group represented about \$1.5 billion or 4 percent of world agricultural trade in 1964. The value of vegetable oils was \$0.975 billion, while that of animal oils and fats was \$0.532 billion.

1/ Calculated from data in tables 4 and 5.

2/ Shares of less developed countries are shown in parentheses.

Regionally, the major exporters of animal and vegetable oils, including oilseeds and oil equivalent of oil nuts, are the United States, West Africa, Other East Asia, Far East Asia and Oceania, EEC, and Latin America. These six major exporters accounted for 76 percent of world exports of these commodities in 1964. The United States alone accounted for 35 percent of world exports. West Africa accounted for 14 percent, Other East Asia for 8 percent, while Far East Asia and Oceania, EEC, and Latin America each for almost 7 percent.

In terms of the two major groups of commodities--oilseeds and oils--the United States accounted for 51 percent of world oilseeds and oil nut exports, and 34 percent of world animal and vegetable oil exports in 1964. These exports were only about 4 percent of total export earnings in 1964. However, these exports were of greater importance in total export earnings of West Africa and Other East Asia--the second and third largest exporters. In West Africa, these exports accounted for 14 percent of total export earnings, while they represented 10 percent in Other East Asia in 1964.

The major importers of animal and vegetable oils including oil equivalent of oilseeds and oil nuts were developed countries--United States, the EEC, and EFTA, Eastern Europe and Latin America. These six importers accounted for 77 percent of world imports in 1964. Western Europe (EEC and EFTA) alone accounted for 53 percent of world imports of animal and vegetable oils including oilseeds and oil nuts in terms of oil equivalent. Japan--the second largest importer--was only important as an import market for oilseeds and oil nuts, accounting for 20 percent of world imports.

#### HISTORICAL TRENDS OF WORLD TRADE IN OILSEEDS, OIL NUTS, AND ANIMAL AND VEGETABLE OILS

The volume of world trade in animal and vegetable oils, including oil equivalent of oil nuts, increased rather rapidly during 1951-65 from 4.7 million tons in 1951 to 9.9 million tons in 1965 (table 7 and figure 1). <sup>3/</sup> However, there were mixed tendencies in the rate of increase in volume of exports of these commodities. For example, exports of oilseeds and oil nuts increased only 0.7 percent per year, while the trade in animal and vegetable oils increased 6.9 and 6.4 percent per year. These historical trends in the volume of trade in oilseeds, oil nuts, and animal and vegetable oils are shown in tables 7 and 8 and figures 1 through 5, while the growth rates for these commodities are shown in table 9 along with the growth rates in population and per capita GNP for the major exporters and importers.

The United States, West Africa, Other East Asia, Far East Asia and Oceania, Canada, and Communist Asia were the largest exporters in 1964 of oilseeds and oil nuts--accounting for 87 percent of world exports. The United States and Canada had the highest growth rate in oilseed and oil nut exports--each increasing at an annual rate of 1.6 percent. The other regions had more modest rates of growth in the volume of exports, with West Africa and Other East Asia increasing their exports at an annual rate of 0.4 and 0.2 percent.

The major importers of oilseeds and oil nuts are Japan and Western Europe (EEC and EFTA). These major importers accounted for 78 percent of world imports in 1964. Of these major import markets for oilseeds and oil nuts, Japan has been the fastest growing market--increasing at an annual rate of 1.5 percent during 1951-65 compared with 0.8 and 0.2 percent for EEC and EFTA. Eastern Europe had the highest growth rate of oilseed imports--increasing at an annual rate of 2.5 percent. However, Eastern Europe, along with the United States and Latin America, while representing growing import markets, have not yet reached import levels anywhere near those of Japan, EEC, and EFTA.

The United States, Latin America, West Africa, and Far East Asia and Oceania were the largest exporters of vegetable oils in 1964--accounting for 64 percent of world exports. The United States alone accounted for 26 percent of world exports in 1964.

-----						

1/ Total includes animal and vegetable oils, margarine and oil equivalent of oilseeds and oil nuts.  
2/ Includes animal oil only (i.e. 411).

The largest importers of vegetable oils in 1964 were the EEC and EFTA. These two regions accounted for 47 percent of world exports in 1964. The EEC was by far the major import market for vegetable oils--accounting for 33 percent of world exports in 1964.

A more detailed analysis of the changes in the patterns of exports and imports of oilseeds, oil nuts, and animal and vegetable oils is outside the scope of this statistical volume. However, the foregoing observations should be helpful to those using the statistical summaries at the end of this report.

#### EXPLANATION OF STATISTICAL TABLES

A portion of the Standard International Trade Classification scheme for agricultural products included in this study is given in table 10. Trade data in tables 11-25 were compiled on the basis of this scheme. Those wishing a more detailed definition of this classification should refer to the United Nations manual (7).

The world is subdivided into 19 major trading regions in the tables on trade in oilseeds, oil nuts, and animal and vegetable oils. They are:

##### Developed Regions and Countries

1. United States.
2. Canada.
3. Japan.
4. EEC--European Economic Community--includes Belgium, Luxembourg, France, Fed. Rep. Germany, Italy, and Netherlands.
5. EFTA--European Free Trade Association--includes Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and United Kingdom.
6. OWE--Other Western Europe--includes Cyprus, Finland, Greece, Iceland, Ireland, Malta, and Spain.
7. Australia, New Zealand, and South Africa.

##### Eastern Trade Regions and Countries

8. Eastern Europe includes Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and Yugoslavia.
9. U.S.S.R.
10. Communist Asia includes Mainland China, Mongolia, North Korea, and North Vietnam.

#### Less Developed Regions and Countries

11. Latin America includes all countries in Central and South America and the Caribbean.
12. North Africa includes Algeria, U.A.R. (Egypt), Libya, Morocco, Sudan, and Tunisia.
13. West Africa includes Angola, Cameroon, Central African Rep., Chad, Congo Rep. (Braz.), Democratic Republic of Congo (Kinshasa) Dahomey, Gabon, Gambia, Ghana, Guinea, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Portuguese Guinea, Senegal, Spanish Sahara, South West Africa, Upper Volta, and Togo.
14. East Africa includes Botswana, Burundi, Comoro Islands, Ethiopia, Kenya, Lesotho, Mauritius, Malawi, Malagasy Rep., Mozambique, So. Rhodesia, Reunion, Rwanda, Somali Rep., Fr. Somaliland, Swaziland, Tanzania, Uganda, and Zambia.
15. West Asia includes Aden, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Saudi Arabia, Syria, Turkey, Lebanon, Qatar, and Yemen.
16. South Asia includes Afghanistan, Bhutan, Ceylon, India, Nepal, and Pakistan.
17. South East Asia includes Burma, Cambodia, Laos, South Vietnam, and Thailand.

18. Other East Asia includes Hong Kong, South Korea, Macao, Philippines, Portuguese Asia, Ryukyu Islands, and Taiwan.
19. Far East Asia and Oceania includes Australian New Guinea, Brunei, New Caledonia, Fiji, Guam, Indonesia, Malaysia, West Irian, Papua, French Polynesia, Sabah, W. Samoa, Sarawak, and Singapore.

The quantity data for trade in oilseeds, oil nuts, and animal and vegetables were compiled from the commodity trade statistics of the United Nations, and supplemented with data from individual country trade statistics, FAO, OECD, EEC, and international commodity association trade publications. Both exports and imports for all countries were compiled in tabular matrix forms and further aggregated into the more concise tabular matrix of 19 major importing and exporting areas (table 11).

The reader can best understand the use of the following trade matrices if one or two things are kept in mind. First, the column headings are importing regions, while the exporting regions for each column are shown on the rows in the far left-hand stub.

For example, the tabular matrix for total animal and vegetable oils, margarine and oil equivalent of oilseeds, oil nuts, and oil kernels for 1951 (table 11), the origin of imports for the EEC can be found by reading down the column labeled EEC. The first figure 298 represents imports of these commodities of 298,000 tons from the United States. The fourth figure 143 represents total animal and vegetable oil equivalent imports of 143,000 tons from countries within the EEC. As one proceeds down the column to the figure 170, it can be seen that the EEC imported 170,000 tons of animal and vegetable oils and oil equivalent from Latin America. The last figure 1,736,000 tons represents the total oil equivalent of oilseeds, oil nuts, and animal and vegetable oil imports of the EEC in 1951.

The exports of any region can be found by reading across the column on a particular row, say Latin America. Latin America exported 73,000 tons to the United States, 10,000 tons to Canada, 170,000 tons to the EEC, 186,000 tons to EFTA and so forth across the table until we arrive at the total oil equivalent of oilseeds, oil nuts, and animal and vegetable oil exports from Latin America of 457,000 tons.

The absence of data for any one importing region from a particular exporting region, say Japan from Latin America, may not mean that Japan did not have any oilseeds, oil nuts and animal and vegetable oil imports from this region. Rather, it means that if Japan had any of these imports, they were less than 500 tons. Similar interpretations can be made for other cells in the following tables where there is no data. For most purposes, the absence of data means trade flows of less than 500 or 100 metric tons, depending upon the particular table being considered.

The two trade matrices that summarize world total and agricultural trade for 1964 in tables 4 and 5 are presented as guidelines so that appraisals can be made of the magnitude of export earnings by regions in a recent year and as a basis for comparison for those wishing to evaluate export earnings from oilseeds, oil nuts or animal and vegetable oils. This latter comparison can be made by multiplying selected unit prices (tables 2 and 3) by the quantity data in each cell of the appropriate quantity trade tables. However, these resulting values can be considered as only estimates of the value of exports or imports. Actual value trade matrices could have been compiled from the United Nations trade data, but time limitations prevented this undertaking.

The following trade data were compiled primarily on the basis of import statistics, since the developed countries have had the most highly developed set of historical statistics and a longer history of reporting these statistics to the United Nations. When import data were lacking, they were supplemented by export statistics. In all cases where there were conflicting data, efforts were made to reconcile these, subject to the magnitudes of exports and imports of any one region as listed by the trade statistics of individual countries shown in the FAO trade yearbook.

Table 11.--World trade in animal and vegetable oils, fats and margarine (091, 411, 412), oilseeds (221), and (oil equivalent) 1951, thousand metric tons\*
